Introduction to MOODLE E-Learning

MOODLE (Modular Object-Oriented Dynamic Learning Environment) is an open-source Learning Management System (LMS) used to create and manage online learning environments. It enables schools, universities, and training institutions to deliver courses digitally, support blended learning, and facilitate distance education.

MOODLE provides a user-friendly platform where teachers can upload course materials, create activities, assess learners, and communicate with students, while learners can access content, submit assignments, participate in discussions, and track their progress anytime and anywhere with internet access.

Key features of MOODLE include course management, quizzes and assignments, discussion forums, grading tools, and progress tracking. It supports various multimedia resources such as documents, videos, and links, making learning interactive and flexible.
